Gym Management Platform

Multi-tenant SaaS for fitness businesses

Product overview — what we are building, what works today, and
where we are headed.

Prepared for client presentation · June 2026

Executive Summary

The **Gym Management Platform** is a complete software ecosystem for running modern fitness businesses at scale. One shared cloud backend powers three dedicated applications — each tailored to a specific role in the gym value chain.

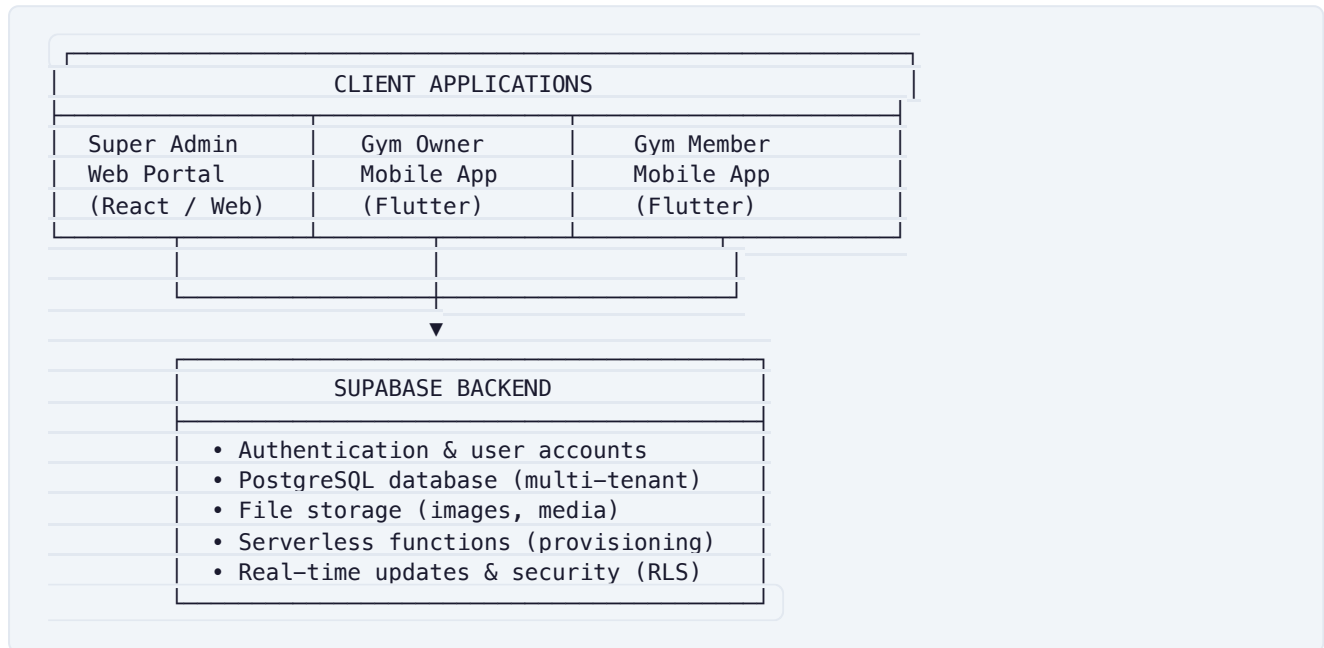

Role	Application	Purpose
Platform Admin	Super Admin Web Portal	Onboard gyms, monitor the platform, manage all tenant data
Gym Owner	Gym Owner Mobile App	Run daily operations — members, attendance, fees, store, content
Gym Member	Gym Member Mobile App	Self-service check-in, subscription visibility, gym discovery, shop browsing

Current status: Core operations are live and working — gym onboarding, member management, attendance (manual and self-service), subscriptions, in-gym store, diet and exercise content management, and platform-wide administration. Additional features are identified and planned for the next phases.

The opportunity: Replace fragmented spreadsheets, paper registers, and disconnected tools with a single, mobile-first platform that grows with the business — from a single gym to a multi-location chain.

Platform Architecture

All three applications connect to one secure cloud backend. Each gym's data is fully isolated — owners and members only see their own gym, while platform administrators have controlled cross-tenant access for support and operations.

Key design principles:

- **Multi-tenant by design** — hundreds of gyms on one platform, each with private data
- **Role-based access** — admins, owners, staff, and members each see only what they need
- **Mobile-first** — owners and members operate from their phones; admins use a web console
- **Secure sessions** — single-device login prevents account sharing and unauthorized access

Super Admin Web Portal

Platform operations console for your team

The Super Admin Web Portal gives platform operators full visibility and control without touching raw databases. It is a React web application secured so that only designated platform administrators can sign in.

What is available today

Feature	Description
Secure admin login	Email/password authentication; only approved platform admins can access the portal
Platform dashboard	Live counts of gyms, members, user profiles, and products across the entire platform
Provision gym owner	One-step onboarding: creates the gym, owner account, and role assignment — owner completes setup in the mobile app
Data browser	Browse, search, create, edit, and delete records across 21 data tables
Cross-tenant visibility	View and manage data for any gym — members, subscriptions, attendance, products, diet plans, exercises, promotions, and more

Tables accessible from the portal:

Category	Data
Core	Gyms, profiles, gym roles, platform admins
Members	Members, attendance records
Billing	Subscription plans, member subscriptions
Shop	Products, categories, sales orders, promotions
Gym setup	Operating hours
Fitness	Exercise categories, exercises
Diet	Diet categories, plans, meals, food items
Security	Active user sessions

Why this matters for your business

- **Faster gym onboarding** — add a new gym customer in minutes, not days
 - **Centralised support** — troubleshoot any gym's data from one console
 - **No manual database work** — safe, audited access without SQL or technical staff
 - **Enterprise-grade security** — admin credentials never expose sensitive backend keys; access is enforced at the database level
-

Gym Owner Mobile App

All-in-one gym operations from a smartphone

The Gym Owner App is a Flutter mobile application (iOS and Android) built for gym owners and staff. It covers the full operational lifecycle — from first-time setup through daily management of members, attendance, fees, and retail.

What is available today

Getting started

Feature	Description
Onboarding experience	Guided introduction to platform capabilities on first launch
Secure login	Email/password sign-in with single-device session enforcement
Setup wizard	4-step first-time setup: gym contact details, operating hours, and first membership plan
Light / dark theme	Appearance preference in gym profile settings

Dashboard — three main tabs

Home tab

Feature	Description
Overview cards	Member count, today’s check-ins, product count, overdue dues
Active promotions	Carousel of current exclusive offers
Pending fees	Members with outstanding payments
Upcoming renewals	Subscriptions expiring within 15 days

Attendance tab

Feature	Description
Check-in / check-out	Manual member check-in and check-out from the front desk
Open sessions	View members currently checked in (including multi-day sessions)
Attendance history	Searchable history with date filters (today, yesterday, 7 days, 30 days, all)

Store tab

Feature	Description
Product catalog	Grid view of gym products with price and stock
Categories	Filter and manage product categories
Record sales	Log a sale with quantity, optional member link, automatic stock decrement
Product images	Display product images when uploaded

Members management

Feature	Description
Member list	All members with subscription summary
Add member	Create member profile, assign plan, set payment status, optional app login
Member detail	Edit profile, status, subscription, and payment information
Member app login	Provision login credentials for the member mobile app
Reset password	Reset member app password from the owner app
Share credentials	Share login details with new members

Gym Profile hub

Section	Description
Gym details	Name, address, contact information
Operating hours	Weekly schedule, timezone, closed days
Fee structure	Create and manage subscription plans; activate or deactivate
Exclusive offers	Create promotions with date ranges; show on member home screens
Exercise library	Categories, exercises with sets/reps, benefits, precautions, and images
Diet plans	Goal-based categories (weight loss, muscle gain, healthy living), full meal plans with macros and food items

Why this matters for your business

- **Run the gym from one app** — no switching between registers, spreadsheets, and messaging apps
 - **Less front-desk friction** — quick check-in/out and instant fee visibility
 - **Content ready for members** — owners build exercise and diet libraries that can be surfaced to members in future phases
 - **Professional onboarding** — new gym customers get a polished first-login experience
 - **Revenue visibility** — overdue fees and renewals surfaced on the home screen every morning
-

Gym Member Mobile App

Modern self-service experience for gym members

The Gym Member App is a Flutter mobile application that puts members in control of their gym experience — from discovering gyms to checking in, tracking subscriptions, and browsing the in-gym shop.

What is available today

Before joining

Feature	Description
Gym directory	Browse and search all gyms on the platform — no login required
Gym detail page	View contact info, weekly hours, and active promotions
Discovery funnel	Prospective members can explore before signing up at the front desk

After joining

Feature	Description
Member login	Secure sign-in linked to one home gym
Profile setup wizard	Weight, height, age, and fitness goal on first use
Single-device session	Same security model as the owner app

Main app — four tabs

Home tab

Feature	Description
Welcome header	Personal greeting, fitness goal, visit count, check-in status
Quick actions	Shortcuts to attendance, gym profile, and directory
Today's stats	Attendance status and today's operating hours
Subscription card	Plan name, dates, payment progress, renewal and due alerts
Active offers	Carousel of gym promotions
Recent attendance	Last five visits with link to full history

Attendance tab

Feature	Description
GPS check-in/out	Automatic proximity check-in when within the gym's location radius
QR check-in/out	Scan a gym QR code for instant check-in or check-out
Visit history	Full attendance history grouped by day
Status dashboard	Total visits, today's status, currently checked-in indicator

Gyms tab

Feature	Description
Directory	Browse all gyms with your home gym highlighted
Search	Find gyms by name, address, or phone
Gym detail	Hours, contact, promotions for any gym

Buy tab

Feature	Description
Product catalog	Browse gym products in a two-column grid
Category filter	Filter by product category
Product details	Name, price, stock level, and image

Profile

Feature	Description
Profile view	BMI, visit stats, subscription, personal and gym information
Edit profile	Phone, emergency contact, address, date of birth, weight, height, age, gender, fitness goal
Quick actions	Edit profile, attendance history, view gym, sign out

Why this matters for your business

- **Self-service check-in** — reduces queue time at the front desk; supports contactless entry
- **Member engagement** — promotions and subscription status keep members informed and motivated
- **Discovery and growth** — public gym directory helps attract new members before they walk in
- **Modern brand perception** — a dedicated member app signals a professional, tech-forward gym

Platform Strengths

What sets this platform apart for gym operators and platform owners:

Strength	Benefit
Complete three-role ecosystem	Admin, owner, and member each have a purpose-built experience — no compromises
Multi-tenant SaaS	One platform serves unlimited gyms; economies of scale for you, low cost per gym
Real-time operations	Attendance, fees, renewals, and stock update live — no end-of-day reconciliation
Mobile-first design	Owners and members work from their phones; no desktop required for daily tasks
Content ownership	Each gym manages its own exercises, diet plans, and promotions
Secure by design	Data isolation per gym, single-device login, admin allowlist, encrypted cloud backend
Scalable infrastructure	Cloud-native backend handles growth from 1 gym to 1,000 without architecture changes
Single codebase per app	Flutter delivers iOS and Android from one project — faster updates, lower maintenance
Rapid gym onboarding	Super admin provisions a new gym in one step; owner completes setup on first login

Built Today vs. Coming Soon

Transparency on what is live versus planned — so expectations are clear.

Capability	Status
Super admin portal with full data access	Built
Gym owner provisioning (one-step)	Built
Owner setup wizard	Built
Member management and subscriptions	Built
Manual attendance (owner app)	Built
GPS and QR self check-in (member app)	Built
In-gym store — owner sales recording	Built
Product catalog browse (member app)	Built
Exercise library management (owner app)	Built
Diet plan management (owner app)	Built
Promotions and exclusive offers	Built
Public gym directory	Built
Single-device session security	Built
Member diet and exercise consumption	Coming soon
Member in-app purchase / checkout	Coming soon
Payment gateway (UPI, cards)	Coming soon
Owner analytics and reports dashboard	Coming soon
Push notifications	Coming soon
Product image upload (owner app)	Coming soon
Forgot-password self-service	Coming soon

Future Roadmap

The following ideas are planned for upcoming phases. They build on the foundation already in place.

Member experience

- Surface owner-created **diet plans** and **exercise library** in the member app, filtered by fitness goal
- Workout logging and progress tracking over time
- Personalised recommendations based on profile and gym content

Commerce and payments

- Member **in-app checkout** for gym products
- Payment gateway integration (UPI, cards, wallets)
- Online membership renewal and fee payment
- Order history for members and sales reports for owners

Owner analytics

- Dedicated **reports dashboard** — attendance trends, revenue, dues aging, member growth
- Export to CSV or PDF for accounting
- Daily, weekly, and monthly summary views

Admin portal enhancements

- Visual charts and trend graphs on the platform dashboard
- CSV export for any data table
- Manage platform admin accounts from the UI (no SQL required)
- Audit log of admin actions

Operations and staff

- **Push notifications** — renewal reminders, payment due alerts, new offers
- **Staff role permissions** — restrict sensitive actions (e.g. fee edits) to owners only
- Geo-radius configuration UI for member check-in zones
- Forgot-password and contact-admin flows on login screens

Growth and scale

- **White-label branding** — custom logo and colours per gym

- **Multi-location chains** — one owner account managing multiple gym branches
 - Referral and loyalty programmes
 - Integration with access control hardware (turnstiles, RFID)
-

Technology Summary

A modern, maintainable technology stack chosen for speed, security, and cross-platform reach.

Layer	Technology	Why
Owner & member apps	Flutter (Dart)	Single codebase for iOS and Android; fast UI; large talent pool
Admin web portal	React + TypeScript	Fast, responsive web console; easy to deploy and update
Backend	Supabase	Managed PostgreSQL, authentication, file storage, and serverless functions
Database	PostgreSQL	Reliable, scalable relational database with row-level security
Authentication	Supabase Auth	Industry-standard email/password auth with session management
File storage	Supabase Storage	Exercise images, diet plan images, product photos
Serverless functions	Supabase Edge Functions	Secure provisioning of gym owners and member accounts
Security	Row-Level Security (RLS)	Database-enforced data isolation — not just application-level checks

Deployment flexibility: Mobile apps publish to Apple App Store and Google Play. The admin portal deploys to any static web host. The backend is fully managed in the cloud — no servers to maintain.

Closing

The Gym Management Platform is a working product with a clear vision. The core operational loop — **onboard a gym, manage members, track attendance, handle fees, run a store, and engage members** — is built and functional across three coordinated applications.

The roadmap above extends this foundation into payments, analytics, richer member experiences, and enterprise-scale features. We are cooking something substantial — and we are ready to show it.
